

**METHOD AND COMPOSITION FOR PREVENTING OR REDUCING EDEMA,
DEEP VEIN THROMBOSIS AND/OR PULMONARY EMBOLISM**

Abstract of the Disclosure

The present invention relates to a composition and method for preventing or reducing edema, deep vein thrombosis (DVT), and/or pulmonary embolism by administering a combination of a fibrinolytic agent and an antioxidant. The composition is particularly useful for treating individuals prior to or during long term flights or other situations involving extended immobility.
